Lecture 1: Statistical Analysis of Gaussian Process

Tianpei Xie

Feb. 6th., 2023

Contents

1 Concentration of Measure and Isoperimetry **2**
1.1 Gaussian Isoperimetric Theorem and Gaussian Concentration Theorem 2
1.2 Lipschitz Functions of Gaussian Variables 2
1.3 The Gaussian Log-Sobolev Inequality 2
1.4 The Borell-Sudakov-Tsirelson Concentration Inequality 2

2 Suprema of Gaussian Process **2**
2.1 Tail Bounds 2
2.2 Sub-Gaussian Process 2
2.3 Metric Entropy and Dudley's Entropy Integral Inequality 2
2.4 Comparison Theorems 2
2.4.1 General Comparison Theorems 2
2.4.2 Slepian's Inequality 2
2.4.3 Sudakov's Minorization Inequality 2
2.4.4 Gaussian Contraction Inequality 2
2.5 Sudakov's Lower Bound 2

3 Asymptotic Analysis **2**
3.1 Functional Law of the Iterated Logarithm 2

4 Geometric Analysis **2**
4.1 Gaussian Width 2
4.2 Stable Dimension, Stable Rank and Gaussian Complexity 2
4.3 Random Projections 2
4.4 Chevet's Inequality 2

1 Concentration of Measure and Isoperimetry

1.1 Gaussian Isoperimetric Theorem and Gaussian Concentration Theorem

1.2 Lipschitz Functions of Gaussian Variables

1.3 The Gaussian Log-Sobolev Inequality

1.4 The Borell-Sudakov-Tsirelson Concentration Inequality

2 Suprema of Gaussian Process

2.1 Tail Bounds

2.2 Sub-Gaussian Process

2.3 Metric Entropy and Dudley's Entropy Integral Inequality

2.4 Comparison Theorems

2.4.1 General Comparison Theorems

2.4.2 Slepian's Inequality

2.4.3 Sudakov's Minorization Inequality

2.4.4 Gaussian Contraction Inequality

2.5 Sudakov's Lower Bound

3 Asymptotic Analysis

3.1 Functional Law of the Iterated Logarithm

4 Geometric Analysis

4.1 Gaussian Width

4.2 Stable Dimension, Stable Rank and Gaussian Complexity

4.3 Random Projections

4.4 Chevet's Inequality
